## Experience

### Sweatworks/ Front End Developer

USA, Remote / Mar. 2021 – Present

Sweatworks is a leading tech company in the fitness industry that brings the most needed fitness products/services from the mind of their creators to reality. At SweatWorks, we are privileged to work with some of the greatest fitness brands in the world. We thrive on helping our clients to reimagine how technology can become a central part of their customer experience.

### Responsabilities

- Designed and coded an entire user dashboard
- Developed back end APIs services with serverless and lambdas.
- Ensured the code stayed at a good quality, readability and functionality.
- Ensured responsiveness of applications
- Met both technical and costumer needs

### Technologies & Tools

- ReactJS, Typescript, Serverless, Node Js, Postgres, CSV Files.

### WinchTowing/ Mobile Developer

USA, Remote / Aug. 2020 – Mar. 2021

I had to design, gather requirements, build and deploy a multi-platform app that enables clients to add their personal store management system and do features such as: add products, create categories edit information, search products, scan products and communicate every piece of information via a server.

### Responsabilities

- In charge of maintaining the clients app.
- Adding efficient and new features good enough to make an MVP.
- Bug fixes around the already done work.
- Preparing documentation regarding to the next tasks/tickets.
- CI and CD implementation.
- Worked with forms, payments, models, upgraded packages, while maintaining code reusability with hooks applying solid principles.

### Technologies & Tools

- React Native, Redux Toolkit, Typescript, CI/CD with github actions, Expo.

## **Surtidora Dios Es Mi Guia/ Mobile Developer**

**Dominican Republic, Remote / Aug. 2019 – Jul. 2020**

I had to design, gather requirements, build and deploy a multi-platform app that enables clients to add their personal store management system and do features such as: add products, create categories, edit information, search products, scan products and communicate every piece of information via a server.

### **Responsabilities**

- Design UI Components & Structure
- Analyze and design app flow
- Ensure data integrity
- Build entire backend
- Build mobile app
- Added UI reusable components, functionality, hooks, business logic.
- Added every feature described above including the scan for the mobile app.

### **Technologies & Tools**

- JavaScript, React Native, Electron, React, .Net Core, SQL Server, Typescript and more.
